

Enveloping, generous and comfortable. Meet the upholstered armchair designed by Stefan Diez, shaped to promote circular design. Funda is created following an innovative process, which minimizes environmental impact. The armchair is made of two different pieces: a metallic structure that works as its skeleton and an upholstered seat, with technical fabric, for both seat and backrest, that shape and bring comfort to the collection.

Both parts can be recycled independently, extending its lifecycle and fostering circular economy. With Funda we optimize resources, without compromising on comfort or resistance.

Available in leather or in the different fabrics of our collection. The base can be white or black.
