### SUSPENDED SHELVING THAT COMES DOWN FROM THE CEILING LIKE A STALACTITE

The courage to innovate led to the suspension of 30mm shelving from the ceiling, creating theatrical compositions that come down from above and help organise space in an original way. The columns, in different lengths, come down from the ceiling creating a dynamic play of suspension, like stalactites. In the open variation, light filters through freely, bringing lightness to the room, while the shelving with backs creates dividing walls. A safety system developed and tested with Fischer ensures maximum hold and safety.
